

Select High Performance Sliding Window

Select High Performance Sliding Window

The Carinya Select High Performance Sliding Window is a new development not previously available in the residential category for Australia's most demanding terrain requirements. Besides a modern designer look, the Carinya Select High Performance Sliding Window is packed with a multitude of performance features, many of which are simply not available in competing products.

Our Sliding Window Lock provides functionality and varying finish options for your project. The functional retractable handle design allows for ease of use and utilises 5 pin cylinder security for peace of mind.

Key Features

- Rather than unsightly exposed tracks found in most residential windows, Carinya has a complete range of threshold and jamb infills as well as end caps to conceal all cavities. This not only provides a superior quality, commercial grade finish but also minimises places for insects, dirt and grit to gather.
- A range of attractive interlock options to meet a wide variety of wind load requirements
- Sills to suit the most severe conditions of residential construction.
